

Line out POD

This POD is designed to attenuate a speaker signal down to a line out level signal. Also, in the design is a hiss suppression filter. This box is perfect for matching your Wurlitzer to your amplifier without blowing your speaker or amp. While, we find it is best to record the old Wurlitzer's with a good pre amp and a condenser mic, if you need to go direct this will help a lot.

1. From your Wurlitzer ¼ inch speaker or headphone out, use a ¼ inch cable and go into "input" of the POD.
2. Connect opposite side of box with ¼ inch cable and go from out to the input on the external amplifier or mixing board of your choice.
