

V.O.L.O....vintage organ line out

Thank you for choosing Vintage Vibe's V.O.L.O.

The V.O.L.O line out box is designed for use with Hammond organs such as the console and spinet organs. It allows them to be connected to an external amplifier using a ¼ inch out. The V.O.L.O has an overall output and one that is low pass filtered. The low pass filter output provides a signal with upper frequencies attenuated which is great when running a bass amp to fatten up the organs low end. Also there is a master volume control to adjust the signal going into the input of your amp.

### **\*\*\*WARNING DISCONNECT AC BEFORE INSTALLING KIT.**

1. Remove the organ rear panel.
2. Using the screws mount the V.O.L.O under the generator shelf
3. Drill a small hole in the generator shelf to pass the wires thru to the pre amp
4. Route the wires to the pre amp chassis
5. Connect the BLACK wire to the pre amp "Gnd" brown terminal or a convenient chassis ground
6. Connect the GREEN wire to the pre-amp "G" terminal red
7. Replace the organ rear panel, reconnect ac power to organ.

This completes set up....
