Thanks for choosing a vintage Vibe product! "The Black Beauty" Pre -amp

This Rhodes pre amp will give you 50 db of extra quiet gain, it runs on 9 volt Duracell battery or you can choose to purchase an ac regulated adapter for power. If you use the 9 volt make sure to remember to remove the input $\frac{1}{4}$ cable when not in use as this will drain the battery. If the L.E.D is on the battery is in use..

1. Facing the pre amp with the knob facing you, the input is on the left. The same side as the LED, connect your Rhodes piano to this side.
2. The right side is your Output: this side goes to your amplifier.
3. Again make sure you remove your input cable when not in use, if the pre amp starts to distort or not give off high gain, you might want to change the battery.
4. Suggested power supply for the pre amp is Radio Shack # 273-1667 800-MA regulated 3-12 volts tip positive, use adapta plug "n". The adapta plug "n" is 5.5 mm od 2.5 mm I.D
